EDUCATION

Information & Communication
Technology
Major in Computer Science
East System Colleges of Rizal
2008

TECHNICAL SKILLS

Python
Django / Flask
React JS (Vite)
C# .NET / ASP.NET
PHP
JavaScript / Node.js
Flutter (Mobile Dev)
MySQL / PostgreSQL
QGIS / GIS Mapping
Data Analysis
LGU Automation

Filipino (Native)
English (Proficient)

AVELINO L. LEGION JR.

SOFTWARE DEVELOPER | DATA ANALYST

15+ Years of Experience in Application Development, GIS & Data Analytics

PROFESSIONAL SUMMARY

Results-driven Software Developer and Data Analyst with over 15 years of experience building enterprise applications, ISP platforms, solar energy e-commerce systems, GIS-based government automation solutions, HRMS platforms, and multi-platform streaming services across government and private sectors. Proven track record in leading development teams, designing database architectures, and consulting with LGU stakeholders to streamline operations. Skilled in full-stack development (Python, C#, React JS, Flutter) and statistical data analysis. Currently building web, mobile and TV platforms for J2 Network & Data Solution while contributing as a freelance data analyst supporting Google's Gemini AI on Upwork.

PROFESSIONAL EXPERIENCE

Freelance Data Analyst — Gemini AI Support

Upwork / Google Teraneuro Project (Gemini AI Data) | January 2020 - Present

- Serve as a dedicated data analyst for the Google Teraneuro Project, collecting, cleaning, and organizing large-scale training datasets that directly support Google's Gemini AI large language models, ensuring data quality, consistency, and accuracy across all deliverables.
- Perform in-depth statistical analysis and generate comprehensive reports to improve Gemini AI data pipelines; conduct rigorous data audits using multi-source triangulation methodologies to validate data reliability and identify discrepancies.
- Design, build, and maintain relational database systems (MySQL, PostgreSQL) that feed directly into Gemini AI training and fine-tuning workflows; execute complex data merges, splits, exclusions, and transformation edits to maintain data integrity at scale.
- Evaluate and annotate AI-generated outputs across multiple content domains to enhance Gemini AI response quality, contributing to reinforcement learning from human feedback (RLHF) and model fine-tuning processes.
- Consistently maintain a high Job Success Score on Upwork by delivering quality results ahead of deadlines, managing multiple concurrent data tasks, and maintaining clear communication with Google's project coordinators.

Software Developer / Systems Architect

J2 Network & Data Solution | Current

- Designed and developed the full-stack web platform for J2 Network (j2network.com.ph), a fiber internet service provider rapidly expanding across Bataan, Pampanga, and Batangas, implementing features including online service applications, real-time coverage area mapping, plan management, and a self-service client portal for subscribers.
- Built and deployed the NetFactory (netfactory.com.ph) ISP platform serving Pampanga, featuring a complete subscriber management system, online connection application workflow, automated billing cycles, and an integrated client portal for account management and support ticketing, backed by an operations console and a GIS plant map tracking fiber routes, NAPs, closures, and service drops against live subscriber status.
- Developed J2 Solar (j2solar.com.ph), a full-featured e-commerce and product catalog platform for solar inverter sales, showcasing authorized brands (DEYE, Growatt, SolaX, Sungrow, LuxPower, Dongjing), with product filtering, quote request system, and lead management for residential, commercial, and industrial solar projects.
- Built the HRMS Workspace (hrms.workspace.com.ph) platform, a cloud-based Human Resource Management System featuring employee records management, payroll processing, attendance and leave tracking, performance evaluation, and role-based access control for multi-tenant organizational use.

LEGION JR.

Software Developer | Data Analyst

SYSTEMS DEVELOPED

- CLPMS (Central Local Payments Management System)
- General Accounting Automation System
- Real Property Tax Management System
- HR Management System
- Water Billing System
- Business Licensing & Permits Issuance System
- Tricycle Franchise Management System
- Municipal Civil Registry Certificates System
- GIS Mapping & Environmental Profiling Module
- Infrastructure Projects Monitoring System
- Local Budget Office Automation System

PLATFORMS BUILT

- J2 Network - j2network.com.ph
- NetFactory - netfactory.com.ph
- J2 Solar - j2solar.com.ph
- HRMS - hrms.workspace.com.ph
- Orpheus - orpheuspinoy.com

PROFESSIONAL EXPERIENCE (CONTINUED)

Software Developer / Systems Architect (continued)

J2 Network & Data Solution | Current

- Developed Orpheus (orpheuspinoy.com), a multi-platform streaming service combining music and video in a single library — playlists, automix, and radio alongside live TV channels, movies, and series aggregated from Spotify, YouTube, Mixcloud, and M3U sources — shipped as an installable progressive web app with matching Android phone and Android TV builds, the TV client switching to a three-pane layout built for remote-control navigation.
- Developed automated billing and subscriber management systems with real-time network monitoring dashboards, service plan configuration tools, and installation package selection workflows for seamless customer onboarding across multiple ISP service regions.

Project Team Leader / Senior Application System Developer

Swinerton Staten Solutions, Inc. (SSSI) - Quezon City | January 2010 - December 2019

- Lead developer for the GIS-based LGU Total Automation Project, architecting and building an integrated suite of enterprise systems including the Central Local Payments Management System (CLPMS), General Accounting Automation System, Real Property Tax Management System, Human Resource Management System, and Local Budget Office Automation System — all designed to digitize and streamline core municipal government operations.
- Developed the Comprehensive GIS Mapping and Environmental Profiling Solutions Module using Quantum GIS and PostgreSQL, integrating Quickbird satellite imagery, Bureau of Lands cadastral data, NAMRIA topographic mapping, and Bureau of Soils data to produce thematic maps (elevation, slope, soil, geologic, land cover, geo-hazard, zoning) for LGU planning and development.
- Built and deployed the Business Licensing and Permits Issuance System, Tricycle Franchise Management System, Municipal Civil Registry Certificates System, Water Billing and Administration System, and Infrastructure Projects Monitoring System across the municipalities of Baras, Pililla, Jalajala (Rizal) and Pulilan (Bulacan).
- Reporting directly to the President and CEO, providing on-site operations updates, strategic recommendations, and technical presentations to LGU heads (Mayors, department heads) on automation adoption, development planning, and system roadmaps.
- Managed the full software development lifecycle from requirements gathering and database design through coding, testing, deployment, end-user training, and post-deployment support, ensuring seamless adoption across all government offices.

IT / Technical Consultant

Local Government of Baras, Province of Rizal | November 2011 - December 2015

- Provided on-site technical consulting for the Municipality of Baras as part of the Integrated and Fully-Customized Comprehensive GIS-Based Total Automation Facility project, advising municipal officials on system deployment strategy, IT infrastructure requirements, network setup, and hardware specifications.
- Conducted comprehensive software testing and quality assurance across all deployed modules — CLPMS, Real Property Information and Assessment Management System, GIS Mapping, Budget Office, and Engineering Permits systems — ensuring reliable performance for daily government operations.
- Delivered hands-on training programs for government staff across multiple departments (Treasury, Assessor, Planning, Engineering, Civil Registry), building digital literacy and driving adoption of GIS-integrated automation solutions that replaced manual paper-based workflows.
- Served as the primary technical liaison between SSSI and the LGU of Baras, coordinating system updates, troubleshooting production issues, and implementing feature enhancements based on user feedback from municipal employees.

DEPLOYED ACROSS

- Baras, Rizal — full automation facility
- Pililla, Rizal
- Jalajala, Rizal
- Pulilan, Bulacan
- Bataan · Pampanga · Batangas (ISP)

KEY PROJECTS & HIGHLIGHTS

- **Google Teraneuro / Gemini AI Project:** Managed large-scale data collection, cleaning, annotation, and analysis pipelines that directly support Google's **Gemini AI** model training and fine-tuning.
- **J2 Network (j2network.com.ph) & NetFactory (netfactory.com.ph) ISP Platforms:** Designed and built full-stack web platforms for fiber internet service providers covering Bataan, Pampanga, and Batangas with client portals, subscriber management, and GIS plant mapping.
- **J2 Solar (j2solar.com.ph):** Built a complete e-commerce platform for solar inverter reselling featuring multi-brand product catalogs, quote request workflows, and lead management for residential to industrial scale projects.
- **HRMS Workspace (hrms.workspace.com.ph):** Developed a cloud-based Human Resource Management System with employee records, payroll, attendance tracking, leave management, and role-based access control.
- **Orpheus (orpheuspinoy.com):** Built a multi-platform streaming service delivering live TV, movies, series, music, and radio from aggregated sources, shipped as an installable progressive web app with matching Android phone and Android TV clients.
- **SSSI - GIS-Based Total Automation for LGUs of Baras, Pililla, Jalajala (Rizal) and Pulilan (Bulacan):** Full computerization of municipal operations including financial management, tax assessment, permitting, and GIS mapping.
